SUMMARY

Product-focused professional with 3+ years across technical consulting, operations, analytics, stakeholder coordination, and execution. B.Tech graduate from IIIT Dharwad with structured Product Management training in product discovery, strategy, prioritization, PRDs, experimentation, and product execution. Combines engineering fundamentals, analytical problem-solving, and cross-functional coordination to translate business requirements into actionable product solutions and measurable success criteria.

EXPERIENCE

Executive – Operations & Analytics *Nov 2025 – Present*
Vayuputra Management Services (VMS)

- Coordinate daily operational workflows, stakeholder dependencies, and escalations to support timely issue resolution and consistent execution.
- Conduct root-cause analysis and review operational trends to identify recurring bottlenecks, prioritize issues, and recommend process improvements.
- Collaborate with relevant stakeholders to clarify requirements, manage changing priorities, and coordinate follow-up actions on operational issues.

Independent Technical & Product Consultant *Jul 2023 – Oct 2025*
Independent Consulting – Small and Mid-Sized Businesses

- Partnered with business owners to identify business, technology, and operational challenges and translate ambiguous requirements into practical solution options.
- Evaluated potential solutions against feasibility, implementation effort, stakeholder priorities, and expected business value to support informed decision-making.
- Refined recommendations using client feedback and clarified requirements to align proposed solutions with business needs and operational constraints.

PRODUCT CASE STUDIES

Real-Time Suspicious Transaction Detection

- Designed a proposed Allow/Review/Block risk-scoring framework to classify suspicious transactions and route higher-risk cases for investigation.
- Mapped transaction signals, decision outcomes, and investigation workflows to structure the proposed product experience and operational handoffs.
- Defined key success metrics: false-positive rate, false-negative rate, suspicious transaction detection coverage, and investigation turnaround time.

Operations / Logistics Control Tower

- Designed a proposed SLA-at-risk dashboard with prioritized exceptions, ownership assignment, countdowns, and escalation workflows for operational teams.
- Applied Impact-versus-Effort prioritization to scope the MVP around exception visibility, task ownership, and timely escalation.
- Defined SLA breach rate, mean time to resolution, overdue exception count, and percentage of exceptions resolved within SLA as success metrics.

Monthly Expense Management Product

- Scoped a budgeting MVP with category-level spending visibility, monthly budget tracking, and configurable spending alerts to support expense awareness.
- Outlined the user journey, core feature scope, KPI tree, and an A/B testing approach for evaluating alternative alert thresholds.
- Defined budget adherence, alert engagement rate, monthly active users, repeat usage, and percentage of users staying within budget as proposed success measures.

Internal Operations Productivity Tool

- Proposed a unified workflow for task assignment, ownership tracking, SLA monitoring, status updates, and escalation management.
- Prioritized proposed MVP capabilities using MoSCoW to distinguish essential workflow features from subsequent enhancements.
- Defined task completion rate, average resolution time, SLA compliance, overdue task count, and escalation rate as operational performance indicators.

Product Teardowns – Swiggy, Google Pay & WhatsApp

- Evaluated user journeys across discovery, checkout, payment completion, onboarding, messaging, and engagement to identify potential usability and workflow friction.
- Proposed improvement opportunities and mapped them to relevant metrics, including funnel conversion, transaction success rate, activation, and user retention.

EDUCATION

B.Tech, Electronics and Communication Engineering *2019 - 2023*
Indian Institute of Information Technology (IIIT) Dharwad

PRODUCT MANAGEMENT TRAINING

CareerVeda – Product Management Program

SKILLS & TOOLS

Product Management:
Product Discovery, Product Strategy, Product Sense, Problem Framing, PRDs, MVP Definition, User Stories, Acceptance Criteria, User Journeys, Roadmaps, RICE, ICE, MoSCoW Prioritization
Product Analytics:
KPI Trees, North Star Metrics, Funnel Analysis, Cohort Analysis, Conversion Analysis, Retention, Root-Cause Analysis, Hypothesis Testing, A/B Testing Fundamentals, SQL, Excel
Technical Skills:
C/C++, Python, OOPs, computer Networking, DBMS, MySQL, Java, Git, GitHub
Tools:
Jira, Figma, Google Analytics, Microsoft Excel, Google Sheets, Git/GitHub
Execution & Collaboration:
Agile, Scrum, Kanban, Requirements Gathering, Stakeholder Management, Cross-Functional Coordination, Process Optimization, Technical Feasibility, Prioritization, Sprint Planning
